

**Discover... the UK's premier location
for deepwater trials, research
and media productions...**

Vobster Quay

Visit us at <http://www.vobsterquay.co.uk/commercial.shtml>

**Vobster Quay is a 36-acre fresh water lake
suitable for underwater testing, research,
field trials and media productions.**

Nestled in the heart of the Somerset countryside, Vobster Quay offers a range of water depths to a maximum of 40m. With excellent clarity and access from extensive waterside concrete aprons, the facility also offers ample office, training, secure storage and workshop space.

Our secluded rural location offers discrete, low background noise for testing and filming, while a three metre-high perimeter fence and police-linked alarm system gives your equipment maximum security. In addition, a large car park provides generous space for equipment deployment or support trailer parking. Access is equally good from the M3, M4 and M5 with a 2-3 hour travel time typical from central London. Bristol International Airport is less than 45 minutes by road.

Our experienced staff have a background in marine science and have hosted numerous trials, client demos and filming events. Whatever your requirements, we can tailor our facility to suit your needs...
